

GN 801

Holders for clamping bolts

technical informations

Specification

Zinc-plated steel, blue passivated.

Features and applications

Holders for clamping bolts GN 801 have been developed for various toggle clamps in the version „forked clamping arm“. The holders can be moved along the clamping arm. Once the desired position is reached, it can be fixed by the clamping screw.

The thread d2 serves to hold clamping bolts, pressure dies and similar devices.

Thereby the ideal clamping height can be adjusted without a loosening of the clamping of the holder to the clamping arm.
