

Levelling feet

Polypropylene base, stainless steel stem

BASE

High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

ARTICULATED STEM

Threaded AISI 304 stainless steel with regulation hexagon.

STANDARD EXECUTIONS

- **LS.A-PP-SST**: without no-slip disk.
- **LS.A-PP-AS-SST**: with EPDM rubber no-slip disk, hardness 70 Shore A, standard assembled to the base.

FEATURES AND APPLICATIONS

Polypropylene levelling elements are particularly suitable for those sectors where they can be in contact with chemical agents and/or for frequent washing with acidic or basic detergent solutions, such as in the chemical, process, pharmaceutical, food, textile and paper industry.

The particular assembling system of the no-slip disk to the base assures a perfect anchoring, preventing separation even in case of impact during transport or of adhesion (sticking) to the floor (see No-slip disks on page -).

ORDER INFORMATION

The levelling elements are supplied unassembled to make carriage and storage easier. The components (base and stem) are supplied in separate packing: less volume taken and better protection from scratches and dirt.

To order bases and stems separately, see:

- table of possible combinations Bases/Stems (see page

ACCESSORIES ON REQUEST

AISI 304 stainless steel nut (see Nuts NT. on page).

* Max static load: is the value above which the load applied to the element may cause some plastic material breakage, in particular conditions of use. Obviously, a factor that takes into consideration the importance and the safety level of the specific application must be applied to this value.

** Load at breakage: is the value above which the load applied to the element may quickly cause some plastic material breakage, in particular conditions of use.

Data with no-slip disk mounted.
