For additional details on the SOUTHCO® Key-Choice System go to [www.security.southco.com](http://www.security.southco.com)

The SOUTHCO® Key-Choice System features a common lock core that fits a wide range of SOUTHCO® latches.

This system allows for the independent selection of the correct latch for your application and the lock core required to manage the security of the end product. The guide below shows each of the latches in the SOUTHCO® Key-Choice System that can be purchased without the lock core installed.

Lock cores are sold separately which provides:

- The option to configure multiple latch styles with the same keying option
- The ability to configure the same latch style with multiple keying options
- Inventory reduction by managing multiple keying options with the lock core, while latches remain without the core installed until keying assignment is desired
